

VINEELA NIMMALA

BUSINESS ANALYST | DATA ANALYST | PROJECT & PROCESS IMPROVEMENT

940-703-8240 | nimmalavineela91@gmail.com | Hayward, CA

PROFESSIONAL SUMMARY

Business Analyst and Data Analyst with 5+ years of experience in requirements analysis, KPI development, business process improvement, data management, project coordination, reporting, data visualization, and quality assurance. Proven ability to translate complex business needs into actionable requirements, workflows, dashboards, reports, and data solutions for technical and non-technical stakeholders. Advanced proficiency in Microsoft Excel, including PivotTables, VLOOKUP/XLOOKUP, macros, VBA, and complex data manipulation, with hands-on experience in Power BI, Tableau, SQL, Power Platform-aligned data workflows, and enterprise data environments. Experienced in requirements gathering, data profiling, validation, source-to-target mapping, test planning, UAT, defect triage, and stakeholder coordination across decentralized Agile environments. Strong project management skills spanning scope, timelines, status reporting, risks, issues, dependencies, and resource coordination. Skilled at developing KPI dashboards, executive reporting, process documentation, user guidance, and data-driven recommendations that improve operational visibility, data quality, and decision-making. Master of Science in Information Systems and Technology from the University of North Texas.

CORE COMPETENCIES

Business Analysis | Requirements Gathering | KPI Development | Business Process Improvement | Process Mapping | As-Is / To-Be Analysis | Data Management | Data Collection & Analysis | Data Visualization | Dashboard Development | Project Management | Project Status Reporting | Timeline & Resource Coordination | Stakeholder Management | SME Collaboration | Software Requirements | Functional Requirements | Test Plans | QA/QC Coordination | UAT | Data Quality | Data Validation | Data Profiling | Configuration & Change Management | Workflow Analysis | Power BI | Tableau | Microsoft Excel | VBA / Macros | Advanced Excel Formulas | SQL | Power Query | Microsoft Office | SharePoint Requirements Concepts | Power Platform Requirements Concepts | Agile / Scrum | SDLC

TECHNICAL SKILLS

Microsoft & Productivity: Microsoft Excel (Advanced Formulas, PivotTables, VLOOKUP/XLOOKUP, VBA, Macros), Word, PowerPoint, MS Access, Microsoft Office

Business Intelligence & Visualization: Power BI (DAX, Power Query, Data Modeling, RLS), Tableau (Calculated Fields, LOD Expressions, Parameters), Cognos Analytics, SAP BusinessObjects

Business Analysis & Process: BRD, FRD, SRS, RTM, User Stories, Acceptance Criteria, Data Mapping, BPMN 2.0, UML, Visio, Lucidchart, Balsamiq, RACI, RAID Logs, SOPs

Data & Analytics: Advanced SQL, SQL Server, PostgreSQL, Oracle, Snowflake, BigQuery, Redshift, Python, R, Stata, Pandas, NumPy, Data Profiling, Data Quality, Reconciliation

Cloud & Data Platforms: AWS S3, Glue, Redshift, Azure Data Lake, Azure Data Factory, Synapse, Databricks, GCP BigQuery, Hadoop, Spark

Testing & Delivery: Test Plans, Test Cases, Test Scripts, UAT, Regression, Integration, Smoke, Functional, Database Testing, Defect Triage, Azure DevOps, JIRA, Confluence, Git

Methodologies: Agile/Scrum, Kanban, SAFe, Waterfall, SDLC, Requirements Traceability, Risk Analysis, Root Cause Analysis, Impact Analysis

PROFESSIONAL EXPERIENCE

Molina Healthcare — Business Analyst & Data Analyst | Jan 2025 – Present

- Facilitate cross-functional stakeholder workshops to elicit, analyze, and refine business requirements, producing BRD, FRD, SRD, and RTM artifacts with clear acceptance criteria and end-to-end traceability.
- Create As-Is and To-Be process flows, perform GAP analysis, and validate future-state designs with business leaders to identify process improvement opportunities and align solutions with strategic objectives.
- Translate business and functional requirements into technical user stories in Jira, supporting prioritization, sprint readiness, delivery coordination, and Agile execution.
- Manage stakeholder communication using RACI matrices and power-interest analysis, serving as a liaison among business, product, engineering, QA, and data teams.
- Lead enterprise data discovery and profiling across CRM, billing, support, and finance systems, identifying and prioritizing hundreds of data quality issues for remediation.

- Design data quality controls covering completeness, uniqueness, referential integrity, validity, and anomaly detection, reducing recurring data incidents and improving data reliability.
- Develop source-to-target mappings and data contracts for relational and cloud data platforms, improving traceability between business requirements, source data, transformations, and reporting outputs.
- Design and deliver executive Power BI and Tableau dashboards tracking KPIs including CAC, CLV, churn, NPS, revenue, and operational efficiency, enabling leadership to monitor performance and trends.
- Define KPI monitoring thresholds, freshness indicators, and automated dashboard alerts to enable proactive issue identification and data-driven decision-making.
- Deliver weekly executive readouts using data storytelling and quantified insights, translating complex analytics into concise recommendations for business stakeholders.
- Coordinate data validation, UAT, and analytical testing with technical teams, resolving defects and validating requirements before deployment.
- Coordinate with Data Engineers on Apache Airflow, AWS Glue, and dbt pipelines, supporting SLA adherence, observability, error handling, and reliable data delivery.

Tools: SQL Server, PostgreSQL, Snowflake, BigQuery, Spark, Airflow, Tableau, Power BI, R, Stata, JIRA, Confluence

Cognizant — Business Analyst & Data Analyst | Sep 2022 – Aug 2023

- Partnered with clinical operations, medical coding, and revenue cycle stakeholders to capture business requirements, document end-to-end workflows, and define operational and financial KPIs.
- Engaged source-system SMEs to resolve data ambiguities across claims, payment, and clinical feeds, improving requirements clarity and data interpretation.
- Authored BRDs, FRDs, source-to-target mappings, SOPs, and test evidence, maintaining traceability across requirements, design, development, and validation.
- Coordinated clinician and business-user validation during UAT, capturing defects, retest evidence, and formal sign-offs using Azure DevOps.
- Produced detailed data mappings across EDI, HL7, flat files, Oracle, and mainframe sources into analytical schemas, supporting accurate reporting and downstream analysis.
- Extracted, transformed, and standardized claims and encounter data using SQL, SSIS, and Azure Data Factory across CSV, JSON, and Excel sources.
- Partnered with ETL engineers to implement Change Data Capture and SCD Type 2 strategies for provider, member, and payer data.
- Developed PySpark pipelines on Databricks and Amazon EMR, reducing batch processing windows by more than 50% and improving data-processing efficiency.
- Developed complex SQL queries to normalize codes, apply business rules, validate data, and improve consistency across analytical datasets.
- Designed star schemas on Snowflake and Amazon Redshift to support operational reporting, analytics, and performance-focused data consumption.
- Implemented data lineage and business glossary updates to clarify metric definitions, ownership, and reporting consistency.
- Conducted exploratory data analysis and prepared analytical datasets using Python and Pandas, including outlier detection, normalization, and missing-value imputation.

Tools: R, Stata, SQL, Redshift, Snowflake, Spark, ADF, Glue, Tableau, Power BI, JIRA, Confluence

Wipro — Business Analyst | Jul 2021 – Aug 2022

- Collaborated with Risk, Fraud, and Compliance stakeholders to elicit and document business requirements, producing BRDs and FRDs with regulatory and governance controls.
- Facilitated governance forums and steering committees, managing project plans, risks, issues, dependencies, and executive status reporting.
- Led conflict resolution for fraud and risk model thresholds by conducting impact assessments, documenting decisions, and preparing approval-ready decision materials.
- Translated fraud rules, thresholds, and policies into detailed data mapping specifications, documenting transformations, assumptions, and end-to-end lineage.
- Maintained requirements traceability across source systems, transformations, analytical models, and dashboards to support audit readiness and controlled delivery.
- Built audit-ready lineage documentation and governance artifacts aligned to NIST and PCI-DSS standards, achieving zero critical audit findings.
- Designed and implemented data lake structures using AWS S3 and Hadoop, standardizing ingestion and data organization patterns.

- Coordinated production deployments and documented rollback procedures, supporting predictable releases and operational continuity.
- Developed fraud heatmaps, chargeback trend analyses, KPI dashboards, and operational visualizations using Tableau and Power BI, increasing fraud-agent productivity by 15%.
- Implemented monitoring and alerting using AWS CloudWatch and SQL checks, reducing mean-time-to-repair by 32%.
- Published operational playbooks for incident management and alert triage, improving support consistency and time-to-detection.
- Chaired governance councils to standardize fraud and risk metric definitions and maintain centralized documentation across stakeholders.

Tools: SQL, R, Stata, Python, Spark, EMR, S3, Glue, Redshift, Tableau, Power BI, JIRA

EDUCATION

Master of Science in Information Systems and Technology | University of North Texas, Denton, TX | 2025
