

Vineela Nimmala

Business Analyst and Data Analyst
9407038240 | nimmalavineela91@gmail.com

PROFESSIONAL SUMMARY:

Business Analyst and Data Analyst with 5+ years translating complex business needs into actionable data solutions, from requirements and data mapping through testing, deployment, and adoption. Deep experience in **SQL, R, and Python**; data visualization (**Tableau, Power BI**); and big data (**Spark/Hadoop**) on **AWS, Azure, and GCP**. Proven record of managing technical projects end-to-end—scope, planning, status reporting, risk/issue management, conflict resolution, and resource coordination—while improving data quality and decision velocity.

- Extensive experience across all phases of **SDLC** using **Waterfall, Agile/Scrum**, and **SAFe** methodologies.
- Led end-to-end requirements gathering using elicitation techniques such as **Stakeholder Interviews, End-User Interviews, JAD/JRP Sessions, Brainstorming, Document Analysis**, and **Prototyping**.
- Authored comprehensive requirements artifacts including **BRD, FRD, SRS, RTM, Use Cases, Business Rules, Data Mapping Documents, GUI Mockups**, and **As-Is / To-Be** process documentation.
- Strong expertise in **Business Process Modeling (BPM)** and **UML** diagrams such as **Use Case, Activity, Sequence**, and **Entity Relationship Diagrams**.
- Conducted **GAP Analysis, Root Cause Analysis, Impact Analysis, SWOT, Risk Analysis**, and **Cost-Benefit Analysis** to support strategic decision-making.
- Proficient in **OOAD (Object-Oriented Analysis & Design)** and feasibility studies for enterprise-scale solutions.
- Tools used include **Microsoft Visio (latest), Lucidchart**, and **Balsamiq** for process flows, wireframes, and prototypes.
- Facilitated Agile ceremonies including **Sprint Planning, Daily Stand-ups, Sprint Reviews**, and **Retrospectives**.
- Worked closely with **Release Train Engineers (RTEs)** to support **Agile Release Trains (ART)** and **CI/CD pipeline** releases.
- Strong hands-on experience in **Data Analysis, Data Validation, Reconciliation**, and **Data Cleansing**.
- Expert in writing, optimizing, and troubleshooting complex **SQL / PL-SQL** queries across **Oracle, SQL Server, Teradata**, and **PostgreSQL**.
- Performed advanced **Data Profiling** and backend validation using **SQL** to identify inconsistencies and anomalies.
- Proficient in **Excel (Advanced)** including **Pivot Tables, VLOOKUP/XLOOKUP, Macros (VBA)**, and **MS Access**.
- Solid understanding of **Data Warehousing** concepts including **OLAP, OLTP, ETL, Kimball**, and **Inmon** architectures.
- Experience with **SSIS, Informatica PowerCenter**, and **Ab Initio** for data migration, transformation, and integration.
- Developed automated ETL pipelines using **Apache Airflow, Luigi**, and **Prefect**.
- Integrated data from databases, flat files, Excel, APIs, and web services.
- Experience designing data solutions using **Azure Data Lake, Azure Blob Storage, Azure SQL Data Warehouse (Synapse), Databricks, HDFS**, and **Amazon Redshift Spectrum**.
- Proficient in **NoSQL** querying and analytics using **MongoDB**.
- Built scalable data pipelines aligned with cloud-native architectures (**AWS & Azure**).
- Strong understanding of **SOA** and **Microservices Architecture**.
- Hands-on experience with **REST** and **SOAP** APIs using **XML, JSON, WSDL**, and **WADL**.
- Documented APIs using **Swagger / OpenAPI** and performed API testing with **Postman**.
- Used **REST** APIs for data integration and backend validation.
- Designed and delivered executive dashboards and KPIs using **Power BI** and **Tableau**.
- Developed enterprise reports using **SAP BusinessObjects (WebI)** and **Cognos Analytics**.
- Created interactive visualizations, automated reports, and drill-down dashboards for business decision-making.
- Performed **Data Mining, Statistical Analysis**, and **Predictive Modeling** using **Python (Pandas, NumPy)** and **Jupyter Notebooks**.
- Implemented **AI-based anomaly detection** solutions across large financial datasets on **Azure** and **AWS** platforms.
- Created detailed **System Test Plans, Test Cases, Test Scripts**, and **Traceability Matrices**.
- Experience with **UAT, Regression, Integration, Smoke, Functional**, and **Database Testing**.

SKILLS & EXPERTISE:

Business Analysis & Program Management	Requirements Elicitation, BRD/FRD, User Stories & Acceptance Criteria, Process Mapping (BPMN 2.0), Data Mapping, RACI & RAID Logs, Status Reporting, Stakeholder Management, Conflict Resolution, Change Control, UAT Coordination, SDLC, Agile (Scrum, Kanban)
Data Modeling & Governance	SQL (Advanced Joins, CTEs, Window Functions), Relational Modeling (3NF), Dimensional Modeling (Star & Snowflake), Data Profiling, Data Quality Rules, Data Lineage, Data Stewardship, Metadata Management, Technical & Business Documentation
Analytics & Statistical Tools	R (tidyverse, dplyr, ggplot2), Stata (do-files, regressions), Python (pandas, NumPy), scikit-learn (basic exposure), Hypothesis Testing (t-test, Chi-square, ANOVA), Regression Analysis, A/B Testing
Visualization & BI	Tableau (Calculated Fields, LOD Expressions, Parameters), Power BI (DAX, Power Query, Data Modeling), Row-Level Security (RLS), Dashboard Governance, Data Storytelling
Databases & Cloud Platforms	MS SQL Server, PostgreSQL, Oracle (11g–19c), MySQL, Snowflake, Amazon Redshift, Google BigQuery, AWS (S3, Glue, Redshift), Azure (ADLS Gen2, ADF, Synapse), GCP (GCS, BigQuery)
Testing & Data Quality	Test Plans & Test Cases, Data Validation Frameworks, Great Expectations (exposure), Deequ (exposure), Unit & Integration SQL Testing, UAT Facilitation, Defect Triage & Root Cause Analysis
Collaboration & Delivery Tools	JIRA, Confluence, Azure DevOps, Git (GitHub/Bitbucket), Miro, Lucidchart, MS Visio, Stakeholder Workshops, Executive Presentations, Cross-functional Facilitation

WORK EXPERIENCE:

Business Analyst & Data Analyst

Molina Healthcare

Jan-2025-Present

- Facilitated cross-functional stakeholder workshops to elicit, analyze, and refine business requirements, producing high-quality **BRD, FRD, SRD, and RTM** artifacts with clear acceptance criteria and traceability.
- Created detailed **AS-IS and TO-BE process flows**, performed GAP analysis, and validated future-state designs with business leaders to ensure alignment with strategic objectives.
- Translated functional requirements into technical user stories using **Jira**, maintaining prioritization, sprint readiness, and alignment with Agile delivery frameworks.
- Managed stakeholder communication using **RACI matrices** and power-interest grids, serving as a trusted liaison between business, product, engineering, and QA teams.
- Led enterprise-wide data discovery and profiling initiatives across CRM, billing, support, and finance systems, identifying and prioritizing hundreds of data quality issues for remediation.
- Designed and implemented robust data quality frameworks covering completeness, uniqueness, referential integrity, validity, and anomaly detection, significantly reducing recurring data incidents.
- Built **MDM survivorship rules** in collaboration with data stewards to establish golden records, improving master data accuracy and consistency across domains.
- Authored standardized data contracts and ingestion specifications for **AWS S3 bronze/silver/gold layers**, reducing schema drift and downstream pipeline failures.
- Authored detailed **source-to-target mappings** for relational and big data platforms, ensuring full traceability from business requirements to physical implementations.
- Designed scalable **relational (3NF)** and **dimensional (star/snowflake)** data models in **Snowflake** and **BigQuery**, implementing conformed dimensions and reusable fact tables.
- Developed and optimized **SQL, PySpark, and Spark SQL** transformations for data cleansing, normalization, deduplication, and enrichment, achieving near-perfect data completeness.
- Partnered with Data Engineers to orchestrate reliable pipelines using **Apache Airflow, AWS Glue, and dbt**, enforcing SLA adherence, observability, and error-handling standards.
- Tuned cloud data warehouses using clustering, micro-partition optimization, and workload isolation, significantly improving query performance and reducing compute costs.
- Designed and delivered executive-grade dashboards using **Power BI** and **Tableau Cloud**, tracking KPIs such as CAC, CLV, churn, NPS, revenue, and operational efficiency.
- Implemented **Row-Level Security (RLS)** and data access matrices across BI platforms, successfully meeting audit and compliance requirements.
- Enabled proactive decision-making by defining KPI monitoring thresholds, freshness indicators, and automated alerting directly within dashboards.

- Delivered weekly executive readouts using advanced data storytelling techniques, enabling multiple high-impact strategic decisions backed by quantified insights.
- Produced ad hoc and exploratory analyses using **Tableau**, **Power BI**, and **SQL**, supporting leadership with timely, data-driven recommendations.
- Built analytical prototypes using **Python**, **R**, and **Stata** to validate segmentation, retention, credit risk, and forecasting hypotheses, influencing product and feature roadmaps.
- Conducted customer creditworthiness assessments using statistical and machine learning–based scoring models to classify and quantify financial risk.

Tools: SQL Server/PostgreSQL, Snowflake, Spark, Airflow, Tableau, Power BI, R, Stata, JIRA, Confluence

Business Analyst & Data Analyst
Cognizant

Sep 2021 – Aug 2023

- Partnered with clinical operations, medical coding, and revenue cycle teams to capture detailed business requirements, document end-to-end workflows, and define operational and financial KPIs.
- Engaged source-system SMEs to resolve data ambiguities across claims, payments, and clinical feeds, ensuring accurate interpretation of healthcare standards and payer logic.
- Authored comprehensive **BRD**, **FRD**, **Source-to-Target Mappings (STM)**, **SOPs**, and **test evidence**, maintaining full traceability across design, build, and validation phases.
- Facilitated cross-functional alignment between coding, compliance, and payer teams, negotiating documentation standards and resolving conflicts impacting claim adjudication.
- Coordinated clinician and business user validation during **UAT**, capturing defects, retest evidence, and formal sign-offs using **Azure DevOps**.
- Produced detailed data mappings from **EDI 837/835**, **HL7**, flat files, Oracle, and mainframe systems into curated analytical schemas, ensuring regulatory and financial accuracy.
- Designed and maintained a centralized payer rules repository to improve transparency, auditability, and consistency of transformation logic.
- Extracted, transformed, and standardized claims and encounter data using **SQL**, **SSIS**, and **Azure Data Factory (ADF)**, supporting multiple ingestion formats including CSV, JSON, and Excel.
- Partnered with ETL engineers to implement **CDC** and **SCD Type 2** strategies for provider, member, and payer dimensions.
- Developed scalable **PySpark** pipelines on **Databricks** and **Amazon EMR**, reducing batch processing windows by more than 50%.
- Authored complex **SQL**, **T-SQL**, and **CTE-based queries** to normalize codes, apply ICD/CPT mappings, enforce payer rules, and improve data consistency.
- Designed optimized **star schemas** (claims, providers, procedures, payments) on **Snowflake** and **Amazon Redshift**, significantly improving analytical query performance.
- Built Operational Data Stores (ODS), Data Warehouses, and federated database models to support enterprise-wide healthcare analytics.
- Established **PHI governance** using **Row-Level Security (RLS)**, masked views, audit trails, and role-based access controls, successfully passing HIPAA audits with zero critical findings.
- Implemented data lineage and business glossary updates to clarify metric definitions, steward ownership, and regulatory reporting consistency.
- Conducted exploratory data analysis (EDA) on claims and credit-style portfolios, translating patterns into actionable business and compliance rules.
- Collected, cleaned, and prepared analytical datasets using **Python (Pandas)**, implementing outlier detection, normalization, and missing-value imputation.

Tools: R, Stata, SQL, Redshift/Snowflake, Spark, ADF/Glue, Tableau, Power BI, JIRA, Confluence

Business Analyst
Wipro, India

Jul 2020 – Aug 2021

- Collaborated with Risk, Fraud, and Compliance stakeholders to elicit and document business requirements, producing BRDs and FRDs with embedded regulatory and governance controls.

- Facilitated governance forums and steering committees, managing project plans, risks, and issues while delivering executive and compliance status reporting.
- Led conflict resolution on fraud and risk model thresholds by conducting impact assessments, documenting decisions, and publishing approval-ready decision memos.
- Presented quarterly analytics outcomes and control evidence to risk committees, securing approval for model and rule changes.
- Translated fraud rules, thresholds, and policies into detailed data mapping specifications, capturing all transformations, assumptions, and end-to-end lineage.
- Maintained requirements traceability across source systems, transformations, analytical models, and dashboards to ensure audit readiness.
- Built and curated audit-ready lineage documentation aligned to **NIST** and **PCI-DSS** standards, achieving zero critical audit findings.
- Designed and implemented data lake architectures with raw and curated zones using **AWS S3** and **Hadoop**, standardizing ingestion and data organization patterns.
- Deployments, and documented rollback procedures, ensuring predictable and compliant releases.
- Developed fraud heatmaps, chargeback trend analyses, and operational dashboards using **Tableau** and **Power BI**, increasing fraud agent productivity by 15%.
- Instrumented monitoring and alerting with **AWS CloudWatch** and custom SQL checks, reducing mean-time-to-repair (MTTR) by 32%.
- Published operational playbooks for incident management and alert triage, significantly improving time-to-detection.
- Chaired enterprise governance councils to standardize fraud and risk metric definitions across the bank.
- Maintained centralized documentation, playbooks, and governance artifacts to ensure consistency and regulatory compliance.

Tools: SQL, R, Stata, Python, Spark/EMR, S3/Glue/Redshift, Tableau, Power BI, JIRA

EDUCATION :-

Master of Science in Information Systems and Technology

University of North Texas – Denton, TX | 2025
